You can find a list of the data files in each of the core games in the Resources section of the official websites. You can find lists of files for both the Nintendo DS and 3DS versions in the official websites. Archive Backup System In order to download the archive data in the 3DS version, you will need the 3DS console to be in "System Settings" on the HOME Menu. You will then be able to go to the "Nintendo eShop" and download the archive file you want to play on your 3DS. In the DS version, you will need a copy of your SD card. You will then be able to go to the "Nintendo eShop" and download the archive file you want to play on your DS. Data Format Data files for the archive are stored in "rom.bin" format. These are saved in a binary file with ".ivb" as the extension. There are different methods to extract these files from the roms. Some of these methods are listed below. PC Most of these files are extracted from the files on the 3DS SD Card. You can use these methods to extract them to a folder on your computer or external hard drive. Raritacker This tool allows you to extract the files from roms using a.rar archive file. You can get this from the homepage. It is a good tool to extract files from roms. You can get the rar file and save it to your computer. Run it and then browse to where you saved the rar file. It will extract the files. Warez When you use this, you need to load the.cdr file from the rar file. It can be found by going to your folder that contains the rar file. Right-click on the.cdr file and then choose "Open With". You will be presented with an open window that shows the files in the rar file. You can then select the files you want to extract.
